All:

Attached please find 2 maps of Paleontological Resources on GSENM. The Paleo Sensitivity (PFYC) Potential Fossil Yield Category map is a model of likelihood for Paleontological resources. As you can see from the map, the center of the Monument/ Karapowit region , is in the highest sensitivity area (5) for fossil resources, surrounded by the next highest level (4).

The 2nd map shows the inventoried fossil resources on GSENM. Please note that this is only those resources that we have inventoried; with only about 6% of the monument surveyed (120,000 acres). Within that 6 % of the Monument surveyed, we have discovered 12 new species of dinosaurs.

Subject: RE: GSENM Paleontology Maps

Dear Cynthia, Thank you so much for sending out these very valuable data. I'd like to add that in addition to the 12 new species of dinosaurs discovered and scientifically named, there are at least 6 more species of dinosaurs that we have found fossils of that are new species, but the studies and formal scientific naming are still under way. Dinosaurs of course get lots of notoriety, but of equal importance are the many other fossil discoveries in GSENM, which

include at least eleven new species of mammal, three new species of marine reptile (plesiosaurs), two new species of crocodile, three new species of turtle, one new species of lizard, several new species of sharks and bony fish, and several thousand of fossil specimens that are now in publicly-accessible museum collections. +95% of these discoveries have been made since 1996. As you can see from the maps that Cynthia sent out, most of the monument has the two highest ratings for likelihood of paleontological resources, and many of the above discoveries come from throughout the Kaiparowits Plateau. That said, there are numerous significant fossils from nearly every portion of the monument. Cynthia - do you happen know the total number of paleontological sites represented by the green dots on the map? As the paleontological representative on the MAC, do let me know if there are any further questions regarding paleontological resources on the monument. Regards, Randy Irmis
